Evan Anggono

Born in Indonesia, I've dealt with art ever since I started doodling in my school work during elementary school. As I get older and dove into the world of gaming, I started noticing some elements of some video games that can be used as an art medium.

My love for video game goes far beyond regular shooter games and it branched out towards racing game. After playing around with the latest Gran Turismo Sport, I discovered the extensive tools and mechanics presented to me and decided that making car liveries will take up much more of my time than actually being behind the wheel.
